

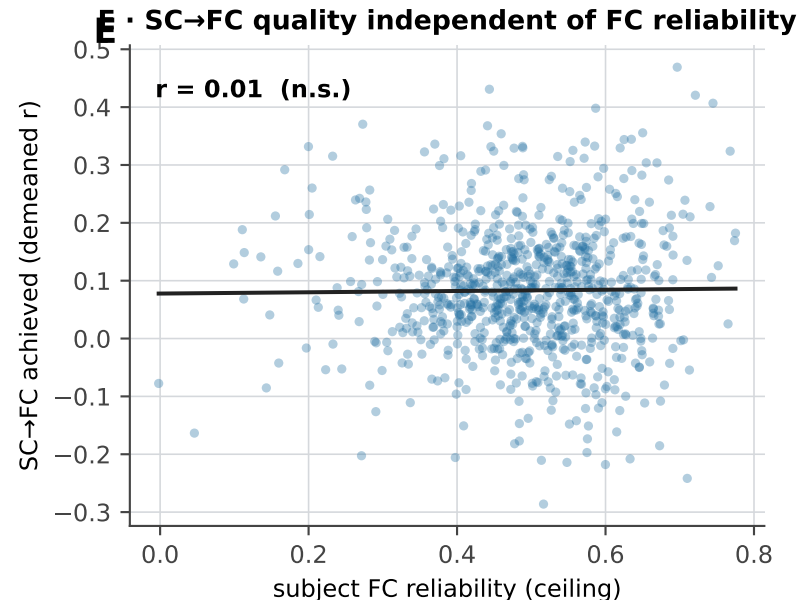

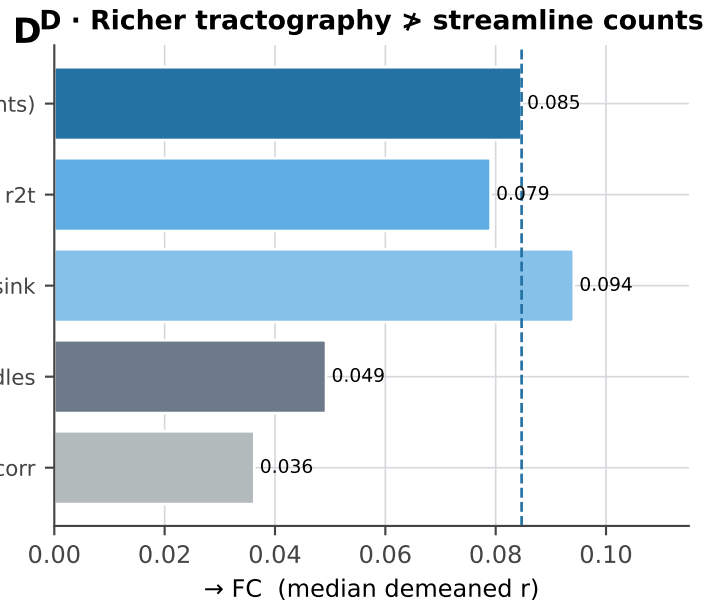

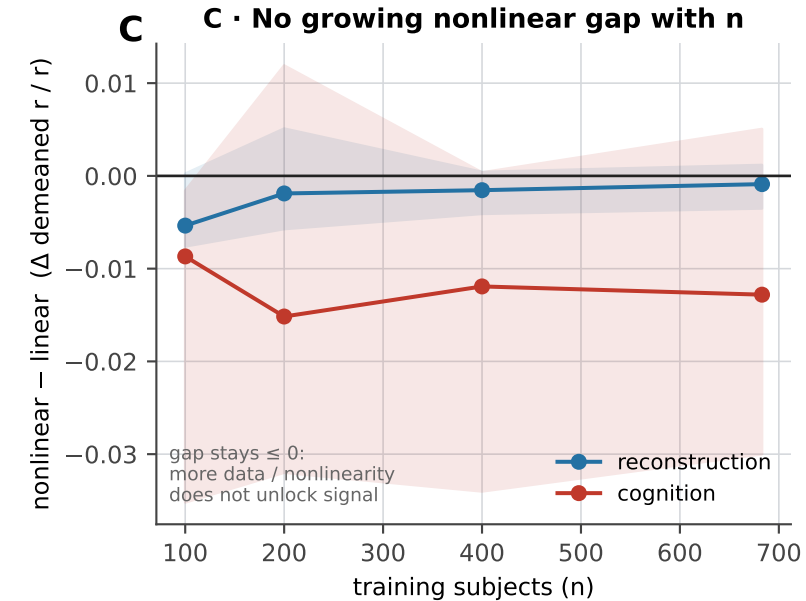

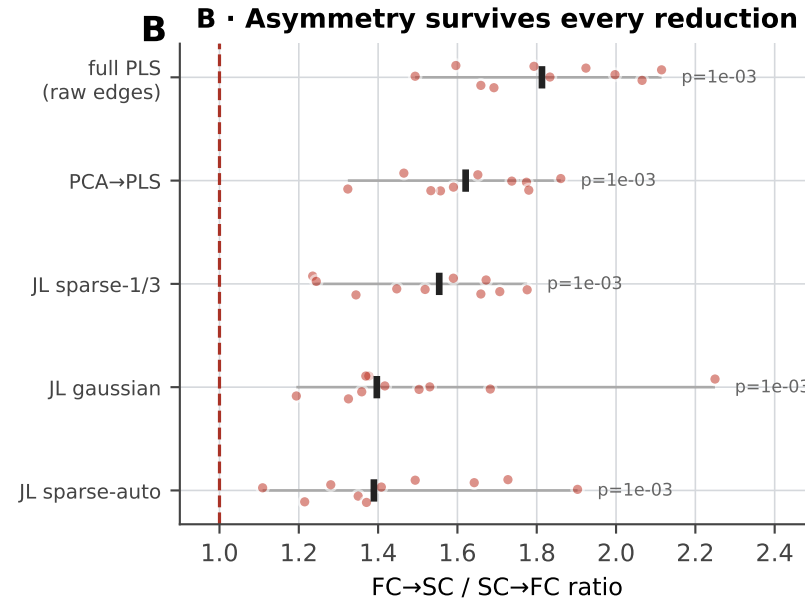

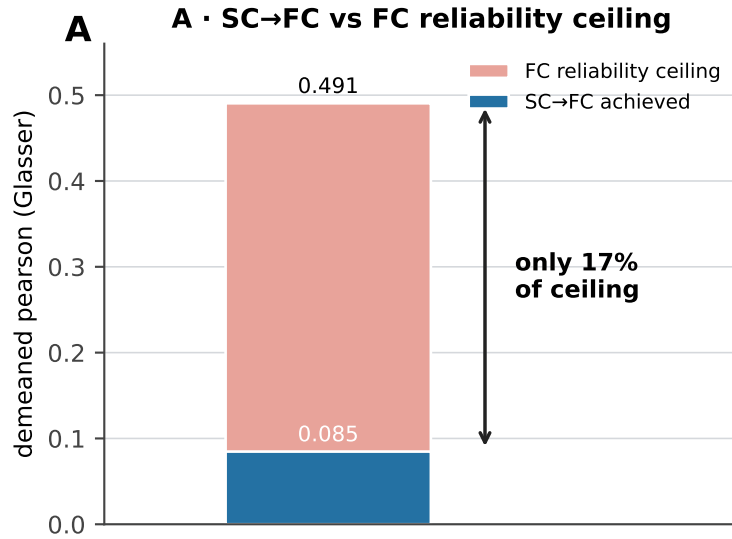

Figure 4 · The missing utility is not recovered by reduction, model class, structural detail, sample size, or FC denoising

Escape routes closed

- ✗ **PCA reduction artifact**
ratio > 1 for raw-PLS, PCA, 3× JL
- ✗ **Bigger / nonlinear model**
KernelRidge & scaling gaps ≈ 0
- ✗ **Crude structural features**
r2t bundles predict FC worse
- ✗ **More subjects**
no growing gap to $n \approx 680$
- ✗ **FC measurement noise**
SC→FC indep. of FC reliability ($r = 0.01$)

Regime: healthy young adults, cross-sectional, normal-range cognition.
